PROFESSIONAL SUMMARY

Security-focused Frontend Engineer specializing in Angular (v17/18+), TypeScript, and Azure serverless architectures. Experienced in designing and developing secure, intuitive self-service web interfaces for workflow-driven enterprise applications. Strong background in secure coding practices, state management optimization using Angular Signals, and cloud-native CI/CD pipelines. Combines frontend engineering expertise with Level 2 production support experience to build resilient, scalable, and performance-optimized web applications.

CORE TECHNICAL SKILLS

Frontend: Angular (v17/18+), Signals, RxJS, NgRx, Reactive Forms, Standalone Components, NgModules, SSR/Hydration
Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS, TailwindCSS
Cloud & Backend: Microsoft Azure (AZ-900), Azure Functions, Azure Static Web Apps, Cosmos DB, REST APIs
Security: Secure coding practices, Role-based access control (RBAC), CORS configuration, Managed Identities, API hardening
DevOps & Quality: GitHub Actions (CI/CD), Cypress (E2E), Jasmine/Karma, Chrome DevTools, Angular DevTools, Root Cause Analysis

PROFESSIONAL EXPERIENCE

Frontend Engineer | Verisec SA | July 2023 – Present

- Designed and developed secure, intuitive self-service web interfaces for workflow-driven enterprise applications.
- Implemented secure frontend architecture with strict input validation, defensive UI programming, and hardened API integration.
- Refactored reactive state management from RxJS-heavy streams to Angular Signals, reducing change detection overhead by ~30%.
- Optimized performance using lazy loading and Angular @defer blocks, improving Core Web Vitals and LCP.
- Built reusable UI components with TailwindCSS, reducing feature development time by 40%.
- Developed centralized HTTP interceptors for authentication, logging, and error handling.

Level 2 Support Engineer | SoluGrowth Pty Ltd | July 2022 – July 2023

- Performed technical root cause analysis for critical production incidents in enterprise web applications.
- Identified and resolved client-side memory leaks using Chrome DevTools.
- Maintained 95% SLA compliance as final escalation point for UI-related failures.
- Improved application stability by enhancing logging, monitoring, and defensive coding standards.

KEY PROJECT – Azure Cloud Resume (Serverless Architecture)

- Developed a globally available serverless web application using Azure Static Web Apps, Azure Functions and, Angular Front-end.
- Implemented secure API communication with CORS policies and Managed Identity authentication.
- Engineered a real-time visitor counter using Azure Cosmos DB.
- Built automated CI/CD pipelines with GitHub Actions for consistent frontend and backend deployments.

EDUCATION & CERTIFICATIONS

Diploma in IT (Network Management) – IIE Rosebank College (2018)

Microsoft Certified: Azure Fundamentals (AZ-900) – Dec 2025

Angular Developer Bootcamp (Signals & v18 Focus) – July 2025
